

EETS in Belgium (Viapass)

INFORMATION ON THE EETS DOMAIN BELGIUM (VIAPASS)

For the use of the EETS service and the associated Toll4Europe On Board Unit (T4E OBU) in the toll domain Belgium („Viapass“) dedicated vehicle parameters have to be transmitted. They serve as the basis for the calculation of the toll. These include for example license plate number, permissible total weight, emission class. The exact information required can be found in the Toll4Europe registration data matrix.

The customer registration for the EETS service is done by the Sales and Service Partner. The transmission of the necessary data to the T4E OBU takes place automatically during the personalization of the T4E OBU.

Note on classification for missing parameters

If the vehicle parameters "maximum permissible gross vehicle weight" and "Euro emission class" are **not available** for a vehicle or if they are **not adequately documented**, the vehicle is classified as follows:

- **Vehicle weight as „gross vehicle weight over 32 t“**

and

- **Vehicle category „other Euro emission class“.**

Subsequent evidence, e. g. to the emission class of the vehicle, cannot be considered retroactively for already driven kilometers.

Driving in the EETS domain Belgium (Viapass)

Once you are on the Belgian road network, you should always use an active operational OBU that meets the legal requirements. You are obliged to replace a defective OBU immediately with a new OBU. Please contact your customer service immediately in case of a technical defect.

Information about exemptions from the toll

Certain vehicles are exempted from the toll. The exemption must be requested from the relevant regional services. Please refer to:

www.viapass.be/en/about-viapass/viapass-for-hgvs/

Further Information:

OBU Quick Start Guides and the OBU User Manual will be available soon via www.toll4europe.eu
