Toll service Netherlands

Toll4Europe Signs Contract as First EETS Provider with the Toll Charger of the Netherlands (RDW)

Munich, 17 March 2025 – Toll4Europe has become the first European Electronic Toll Service (EETS) provider to sign a contract with the Dutch toll charger RDW. This marks a significant milestone in the implementation of the new Dutch truck toll system, set to launch in mid-2026, and a clear commitment from Toll4Europe to offer the toll service for Dutch and European customers from the start of the service.

From mid of 2026 onwards, the Netherlands will introduce a distance-based toll system for trucks over 3.5 tons. Similarly to neighboring countries, the toll will apply to all highways and selected provincial and municipal roads. The toll rate will also depend on the truck's emission class, with lower-emission vehicles benefiting from reduced charges.

"The EETS-compliant introduction of the Dutch HGV tolling system will further enhance harmonization within the European tolling landscape. We are eager to provide this important service extension to Dutch and European customers, ensuring seamless, cross-border toll collection and settlement through operational excellence.", says Felix Wex, CEO of Toll4Europe.

To comply with the new toll regulations, all trucks operating in the Netherlands must be equipped with On-Board Units (OBUs) that record the kilometers driven on toll roads. Preparations for the system's implementation are currently underway, ensuring the necessary technical infrastructure is in place for a seamless launch.

We are delighted to take this major step together with the Dutch government, reinforcing our commitment to sustainable and efficient mobility solutions in Europe.

RDW About RDW:

RDW is the Netherlands Vehicle Authority. As a public service provider, we stand for safety, sustainability and legal certainty in mobility, for road users and society. Our tasks concern the safety and sustainability of vehicles; from design on the drawing board to dismantling or export. Legal certainty and reliability are the basis of our services. We have been doing this every day for 75 years throughout the Netherlands.

About Toll4Europe:

Toll4Europe GmbH, founded in 2017 and based in Munich, is a joint venture between T-Systems Road User Services GmbH, Daimler Truck AG, DKV EURO SERVICE GmbH + Co. KG and euroShell Cards B.V. Based on the combined expertise of the individual partners, the company has developed a standardized toll collection device and a platform for collecting and billing cross-border and cross-service toll services.

To make this as simple as possible, Toll4Europe offers a universal on-board unit (OBU) for the truck cockpit. The comprehensive EETS service is already active in Belgium, Germany, France, Spain, Portugal, Austria, Bulgaria, Hungary, Italy, Switzerland, Poland, Slovakia, Slovenia as well as the Scandinavian Storebælt and Øresund bridges, various tunnels and parking lots. Further toll domains are constantly being added. Further information can be found at www.toll4europe.eu.
